

# TAINÁ ROCHA

I am a researcher working on patterns of biodiversity distribution, focusing on the impacts of global change (climate change and land-use and land-cover change). My recent interests and work include: **1.** Analysis of climate data and land-use and land-cover data under different scenarios of climate change, **2.** Spatial analysis of species diversity (alpha and beta diversity), **3.** Ecological niche models/ species distribution models and other niche analyses to assess the impacts of global change on biodiversity, **4.** Biogeographic patterns and evolutionary history in the Neotropics.

**Note:** I use open-source tools and platforms. I am interested in good practices about open science (open databases, open software, etc.), good workflows, reproducibility and FAIR principles.
