TAINÁ ROCHA

I am a researcher working on patterns of biodiversity distribution, focusing on the impacts of global change (climate change and land-use and land-cover change). My recent interests and researches comprise: **1.** Analysis of climate data and land use and land cover data under different scenarios of climate change, **2.** Spatial analysisof species diversity (alpha and beta diversity), **3.** Ecological niche models/speciesdistribution models and other niche analyses to assess the impacts of global change onbiodiversity, **4.** Biogeographical patterns and evolutionary history in the Neotropics.

Note: I use open-source tools and platforms. I am interested in good practices about open science (open databases, open software, etc.), good workflows, reproducibility and FAIR principles.
